

There's a new trend in Physical Therapy. Don't miss out.

Acuscope-Myopulse microcurrent.

Non-invasive. Safe and effective. Bio-compatible electricity.

For the Nervous System (the nerves), microamperage therapy helps to clear the pathways that neurons conduct bio-electricity from brain to body and back again.

For the Connective Tissue, microamperage therapy restores normal electrical potentials to contractile cells; reducing excess where “over-firing” and increasing the “charge” where simply insufficient or extremely deficient.

Evidence of change is reflected in the biofeedback readouts before and after each intermittent stimulation.

Microcurrents are moving continuously in all living organisms. Therapy with these modalities reestablishes normal conductivity. Reawakens dormant cells. Reactivates functions of cellular metabolism.

Circulating the electrical spark from neuron to neuron, Oxygen is more efficiently distributed through the bloodstream, throughout brain and body. Cellular uptake of bioavailable nutrients increases measurably (research available). Cellular effects include repolarization, increased membrane transport, enhanced ion exchange.

A gentle, biologically compatible push applied intelligently can restore the natural ability of cells to self-repair more efficiently. Biological mechanisms are given a highly beneficial boost, like a “jump start” for a dead car battery, restoring its ability to hold a charge.

Acuscope therapy improves general cell metabolism; reduced resistance increases circulation of nerve current, blood and lymph; uptake of nutrients during digestion; flushing of toxins and waste product during elimination.

Improves conductivity in all circulatory systems: neurological; cardiovascular (blood, veins, and arteries); lymphatic (flushing and draining through lymph nodes); digestive; and eliminative.

Specific areas of chronic and acute damage to connective tissue (muscle, tendon, ligament, and fascia - joint structures, the back, neck, and spine) can be identified and addressed with appropriate frequencies and wave forms producing speedier recovery.

You will observe the results in posture, gait, breath capacity, strength in muscles, and range of motion in joints; a general improvement in overall connective tissue condition.

Pain reduction is immediate.

Swelling and inflammation quickly dissipate.

Stress, tension and anxiety are reduced. Nerves quiet and relax.

A calm, cheerful, optimistic outlook returns.

Sleep improves.

Increases the likelihood of patient compliance with healthy lifestyle choices.

Alpha Brainwave Synchronization for Cognitive Impairment: sustaining even, regular brain waves in the Alpha Frequency range (7 – 13 cps) for periods of 15 -20 minutes repeatedly can produce a calm, relaxed state of mind; observable in speech, demeanor, and facial expression as well as posture. When neuron regeneration and improved nerve signal conduction is combined with cognitive therapy such as visualization and memory/retention exercise, the therapeutic benefits are remarkable. Mental clarity can return. Dementia can diminish.

A series of treatments is obviously necessary to achieve these goals. It is not a “quick fix” pill or a shot.

Neuromuscular reeducation requires a cumulative effect over several weeks' or months' time in serious cases. However, no other biotechnology in existence today can produce comparable results. CALL to find out how you can join the trend. Provide this non-invasive Physical Therapy modality for your Patients' benefit.
